MEGALINEAR MLRE-45

MEGALINEAR LIVE ROLLER END-USER 45MM
THE NEW MEGADYNE PERFORMANCE BELT
DESIGNED TO MEET THE NEEDS OF LIVE
ROLLERS IN AUTOMATED WAREHOUSE
SYSTEMS.

In the realm of modern intralogistics, power transmission belt systems must meet rigorous criteria: reliability, durability, and efficiency. Critical to live roller belt performance is its interaction with transfer rollers. The belt must exhibit flexibility while minimizing friction on metal rollers. This flexibility ensures smooth navigation through the twists and turns of the roller conveyors. The choice of belt material and design is crucial for achieving a balance—providing robust friction on metal rollers for secure item transfer and low friction on idlers to minimize energy consumption.

A well-engineered belt, adept at enduring bending cycles, modulating friction, and conserving energy, becomes integral to the reliability, durability, and efficiency of the entire intralogistics operation. Typically delivered in open-end rolls, these belts require on-site customization by warehouse maintenance teams to fit the application.

MEGADYNE MLRE-45

Megadyne introduces **MEGALINEAR MLRE-45**: a durable, reliable and engineered belt designed for end-user intralogistics warehouse applications.

STRUCTURE

MEGALINEAR MLRE-45 is manufactured from polyurethane 85 ShA, in standard yellow with black anti-static fabric on the bottom.

Features:

- high strength aramid tensile members
- yellow finish for easy wear detection
- high friction surface
- black anti-static fabric to reduce dust abrasion and lower friction

Characteristics:

Standard Width: 45 mm

Standard Length: 200 m open-end rolls

Thickness: 4.7 mm

Max traction load: 4,025 N

Breaking strength: 16,100 N

Working temperature: -13 / +176 °F (-25 / +80 °C)

MLRE - 45

MEGALINEAR MLRE-45

MEGALINEAR-45 YELLOW - VALUE AND PERFORMANCE

MATERIAL
HANDLING

ADVANTAGES

PERFORMANCE

- high grip and less slip on the rollers
- anti-static fabric to reduce wear and lower friction
- flexible belt construction
- improved wear and abrasion resistance
- designed to resist ozone and temperature degradation

HIGH EFFICIENCY

- stable tension over time
- smooth running

LESS MAINTENANCE

- easy installation
- fast and easy replacement on site
- easily spliced using common splicing equipment

ENERGY SAVING

- low energy consumption due to high flexibility
- optimized CoF improves energy efficiency

COST SAVING

- easily maintained
- energy efficient design
