

Conveyance Products for Airport Baggage Handling

Belt expertise for high-throughput baggage handling systems.

- ✓ Abrasion-resistant belting
- ✓ Energy-efficient conveying solutions
- ✓ Reliable performance across baggage handling systems

Production reliability for conveyor
dependent operations.
Downtime is not an option.

Baggage handling systems run continuously.

Small conveyor issues quickly become major operational disruptions.

Common challenges across airport operations include:

- Baggage jams that disrupt flow and delay operations
- Emergency repairs and unplanned downtime
- Safety risks across high-speed baggage handling systems

These challenges reduce production efficiency, increase operational risk, and impact profitability.

Production reliability for conveyor dependent operations.
Downtime is not an option.

Belt Power helps baggage handling systems keep bags moving.

We work with BHS managers, site managers, maintenance teams, and operations leaders to diagnose conveyor issues in real operating conditions and recommend solutions built for the application.

We are accountable for uptime and total cost of ownership. Our in-depth, technical product expertise, extensive local inventory backed by national scale, and 24/7 field support ensure solutions are selected and installed for the application. We extend service life and improve throughput across our customer's facilities.

Product Solutions

- Lightweight conveyor belts
- Bag centering belts
- Heavy duty HSD Paddle belts
- Engineered carousel wheels
- Gear motors, Drum motors
- Segmented transfer plates
- Belt edge protectors

Engineered Solutions for High-Demand Environments

Extended Belt Life & Reduced Jams

Abrasion - and wear - resistant belting combined with belt edge protectors improves service life and helps reduce baggage jams caused by belt failure or debris.

Power Turn Belts and Pulleys

- Chain and bead driven power turn belts fabricated in house for quick delivery.
- Black thermoset urethane tapered pulley properties enable thermal overload function of motor to be effective.

Safety & Compliance

- Flame-retardant materials help minimize fire hazards in baggage handling environments.
- Low-noise belt fabrics support a safer and more comfortable working environment.

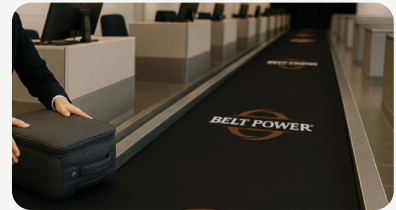

Engineered Solutions

Engineered carousel wheels with concave wheel surface improves service life by eliminating edge loading.

Energy Efficiency & Cost Reduction

Energy-efficient belt and drive solutions reduce power consumption and improve total cost of ownership.

Consistent Bag Placement

- Inconsistent bag placement can lead to bag jams and slow downs.
- Durable logo printing or 5" yellow dots heat pressed into belt.

Production reliability for conveyor dependent operations.
Downtime is not an option.

Why Airport Operators Choose Belt Power

Conveyor expertise with real-world support

Belt Power combines belt expertise, national scale, access to the industry's broadest range of suppliers, deep local inventory, and 24/7 field support to reduce failures and keep production on track.

Comprehensive Technical Support

Baggage handling application expertise:

- Accumulation
- Power turns
- X-ray, screening and detection
- General transport conveyors
- Merges and Diverters
- Aircraft loading
- Queue and metering systems
- Inbound unloading

Manufacturer Partners

- ✓ Ammega
- ✓ Habasit
- ✓ Forbo
- ✓ Yongli
- ✓ Flexco
- ✓ Interroll
- ✓ SEW
- ✓ PPI

Reduce Operational Costs

Belt Power helps airport operations reduce:

- ✓ Unplanned downtime
- ✓ Labor requirements
- ✓ Replacement frequency
- ✓ Installation time
- ✓ Product damage
- ✓ Energy use
