

Belt Solutions for Fruit and Vegetable Production

Belt expertise for high-throughput produce processing operations.

✓ Sanitary belt constructions

✓ Reliable performance in washdown environments

✓ Engineered solutions for hygienic food production

✓ Foreign material contamination prevention

Production reliability for conveyor dependent operations.
Downtime is not an option.

Fruit and vegetable processing runs continuously.

Small conveyor problems quickly become major production disruptions.

Common challenges include:

- Sanitation downtime and hygiene control risks that can lead to product recalls.
- Yield loss and product waste during trimming, cutting, and transport.
- Product availability challenges and long lead times for replacement components.
- Foreign material contamination creating product and profit loss.

These challenges reduce production efficiency, increase operational risk, and impact profitability.

Belt Power helps fruit and vegetable processors optimize line production.

Our teams work with maintenance managers, reliability engineers, and operations leaders to diagnose conveyor issues in real operating conditions and recommend solutions designed for hygienic food processing environments.

We are accountable for uptime and total cost of ownership. Our in-depth, technical product expertise, extensive local inventory backed by national scale, and 24/7 field support ensure solutions are selected and installed for the application. We extend service life and improve throughput across our customer's facilities.

Production Applications

Belt Power supports conveying systems across key produce production stages including:

- Trimming operations
- Cutting and slicing
- Washing systems
- Drying and dewatering
- Incline and decline transport
- Cooling operations
- Packaging lines

Production reliability for conveyor dependent operations.

Engineered Solutions for Fruit and Vegetable Processing

Engineered Belting for Hygienic Food Processing

Produce operations require conveyor systems designed for sanitation, durability, and product protection. Belt Power provides engineered belt solutions designed for these demanding environments.

Positive Drive Homogenous Belt Solutions

Homogenous belt constructions provide:

- Low tension operation
- High strength
- Improved cleanability for sanitation-sensitive applications

Sanitary and Washdown-Ready Materials

- Engineered belt fabrications designed to withstand heavy loads and frequent exposure to chlorine-based washdown chemicals.
- HACCP-compliant, antimicrobial belt materials designed to support hygienic food processing environments.

Belt Power Advantages

Premium belt constructions designed specifically for produce processing environments including:

- Capped edges
- Non-fray constructions
- Homogenous positive drive belts
- Reinforced cleats

Industry-Specific Conveyor Features

- Belt cleaners
- Polyester open mesh belts with cleats and V-guides
- Industry-specific blades and knives for production and packaging
- Vertical Form, Fill & Seal belts with specialty covers

Complete Conveyor Support

Beyond belting, Belt Power provides a wide range of complementary components including:

- Blades and cutting knives
- Guidrails
- Power transmission components
- Pulleys
- Industrial hose

Production reliability for conveyor dependent operations.
Downtime is not an option.

Why Fruit and Vegetable Processors Choose Belt Power

Conveyor expertise with real-world support

Belt Power combines belt expertise, national scale, access to the industry's broadest range of suppliers, deep local inventory, and 24/7 field support to reduce failures and keep production on track.

Comprehensive Product Support

Fresh cut processors can streamline sourcing with one partner for:

Lightweight conveyor belts Blades

Modular belting Homogenous belts

Filter mesh Drum Motors Belt cleaners

Timing Belts Industrial hose

Power transmission components

Manufacturer Partners

- ✓ Intralox
- ✓ Esbelt
- ✓ Worldwide Electric
- ✓ SEW Eurodrive
- ✓ Esband
- ✓ Megadyne
- ✓ Stober
- ✓ TGW / Edge

Reduce Operational Costs

Belt Power helps fruit and vegetable processors reduce:

- ✓ Unplanned downtime
- ✓ Labor costs
- ✓ Replacement frequency
- ✓ Installation time
- ✓ Product damage
- ✓ Energy use
- ✓ Inventory levels
- ✓ Product loss
