

Belt Solutions For Roofing Production

Belt expertise for high-speed, abrasive roofing operations.

- ✓ High-grip, wear-resistant belt surfaces
- ✓ Durable solutions for laminator performance
- ✓ Reliable tracking across roofing lines

Production reliability for conveyor dependent operations.
Downtime is not an option.

Roofing production runs continuously.

Small conveyor issues quickly become major production disruptions.

Common challenges include:

- Costly jam-ups during production campaigns
- Belt misalignment and tracking issues
- Unexpected and unplanned downtime

These challenges reduce production efficiency, increase operational risk, and impact profitability.

Belt Power helps roofing plants optimize line production.

We work with maintenance, reliability, and operations teams to diagnose conveyor issues in real operating conditions and recommend solutions built for the application.

We are accountable for uptime and total cost of ownership. Our in-depth, technical product expertise, extensive local inventory backed by national scale, and 24/7 field support ensure solutions are selected and installed for the application. We extend service life and improve throughput across our customer's facilities.

Engineered Solutions for Roofing Production

Reducing Downtime & Failure Points

Roofing operations rely heavily on mechanical lacing and V-guides -common failure points in the system. Belt Power addresses these challenges with:

- Industry-leading mechanical splice fabrications designed to outlast standard solutions
- Segmented urethane V-guides that eliminate premature wear and unexpected failures
- 24/7 field technician support providing vulcanized splicing during scheduled maintenance to maximize belt life

High-Grip, Wear-Resistant Covers

A wide variety of cover surfaces provide the grip and durability needed to maintain orientation through the process.

Industry-Specific Conveyor Features

- Specialty high-grip and abrasion-resistant covers
- Segmented urethane V-guides
- Urethane shield lacing
- Wear-resistant hose for conveying granules in the mineral surfacing stage

Urethane Shield Lacing Protection

A proprietary urethane shield fabrication will protect against the common staple lace failure mode pictured above. You can expect longer service life and reduce the frequency of lace pull-out during production runs.

Improved Belt Tracking & Durability

- Segmented urethane V-guides that maintain profile, resist wear, and prevent separation—resulting in longer service life and fewer belt changes
- Low-stretch belt materials
- Balanced ply constructions
- Reinforced edges for high-speed, abrasive applications

Production reliability for conveyor dependent operations.
Downtime is not an option.

Why Roofing Plants Choose Belt Power

Conveyor expertise with real-world support

Belt Power combines belt expertise, national scale, access to the industry's broadest range of suppliers, deep local inventory, and 24/7 field support to reduce failures and keep production on track.

Comprehensive Product Support

Roofing plants can source from one partner:

- Lightweight conveyor belts
- Blades
- Modular belting
- Homogenous belts
- Steel chain
- Idler rollers
- Belt cleaners
- Timing belts
- Industrial hose
- Power transmission components

Manufacturer Partners

- ✓ Habasit
- ✓ Ammeraal
- ✓ Forbo
- ✓ Beha Belting
- ✓ Volta Belting
- ✓ TGW
- ✓ Omni
- ✓ Ralphps Pugh
- ✓ Peer Chain
- ✓ Worldwide Electric
- ✓ SEW Eurodrive
- ✓ Kuriyama
- ✓ Danfoss
- ✓ Continental

Reduce Operational Costs

Belt Power helps reduce:

- ✓ Unplanned downtime
- ✓ Labor requirements
- ✓ Replacement frequency
- ✓ Installation time
- ✓ Product damage
- ✓ Energy use
